Upcoming tier 1 city

Following Andhra Pradesh's bifurcation, Visakhapatnam became the epicenter of rapid development and urbanization, resulting in expanded urban facilities, employment prospects and also mobility. This necessitates the creation of an efficient mobility system that has the least possible impact on the city's natural habitat and culture that define it.

Untapped tourism sector

Visakhapatnam is the state's second most frequented tourist destination, featuring a variety of natural and cultural attractions with untapped potential. A proper attention on promotion and connectivity options can help in generating revenue employment opportunities for people in the city.

Machine replacing human jobs

For decades, a large portion of the population has been reliant on sectors that require unskilled labor. However, many of these workers are at risk of losing their jobs as industries automate their processes. There is an urgent need for alternative employment for these people along with inexpensive housing and mobility options.

Rise in electric vehicles

Open minded youth population, wider road infrastructure, enough parking space in the city, rising fuel prices and increased subsidies are some of the factors because of which people are showing interest in electric vehicles. Catering to this growing need will require planned interventions across all sectors enabling smooth transition.

Disconnected outskirts

City outskirts being more affordable living option attracts a lot of population, especially people working in the industries at lower wages. These areas are largely unplanned and are poorly connected with different parts of city. A better transportation system can create new job possibilities while reducing accidents, increasing efficiency, and raising people's living standards.

Unmet potential of public mobility

The AP Road Transportation Corporation has always been a pioneer in incorporating new technologies into public transportation. However, lack of funding and constant losses over the years has resulted in declined rideshare and an inefficient system which fails to even meet the needs of its loyal consumers.
